

Even though this service isn't offered in my area yet I am anticipating it. I currently can tune any local tv station, website of radio station I want to catch weather or traffic. I however would find it much more convenient to be using XM's version since I can get all my radio entertainment and news from there already. I pay for the service and the difference XM offers over regular broadcasting, to get instant access to the information I need really want when I want it. I would strongly urge you to allow XM to continue to offer it's services and would be against restricting what they are allowed to broadcast to us.
